

# AudioSwift Scripts for Ableton Live

Designed by Nigel Rios

## 1.1 Introduction

The following scripts were made for AudioSwift, a macOS app that transforms your trackpad into MIDI tools like sliders, XY pads, triggers, MPE and more. Visit [audioswiftapp.com](https://audioswiftapp.com) to download a free 15-days trial of AudioSwift.

These custom scripts were designed to improve the workflow in Ableton Live using a trackpad.

### **AudioSwift Control Script**

Designed to control the macros and device parameters directly from a trackpad with simple touches. This is great for quick access to the devices or for write automation in real time, specially when working mobile with a MacBook. [Read more.](#)

### **AudioSwift Mixer Script**

It adds better control of the mixing section in Ableton Live using simple touch gestures on a trackpad. [Read more.](#)

## 1.2 Installation

They work with Ableton Live 10 to 12 on macOS and require AudioSwift. Read each link above for more information.
