MaxForLive Devices

Designed by Nigel Rios

1.1 Introduction

The following MaxForLive devices were made for AudioSwift, a macOS app that transforms your trackpad into MIDI tools like sliders, XY pads, triggers, MPE and more. Visit audioswiftapp.com to download a free 15-days trial of AudioSwift.

MPE Modifier (1.1)
It changes the incoming Slide and Pressure MPE messages into Control Change messages per voice, and also replicates global messages like ModWheel, Pitch Bend, and Aftertouch to all MIDI channels. Read more.

Scaler MIDI (1.0)
It's a MIDI effect wrapper for the Scaler AU plugin, to be used in the same track as another instrument. This wrapper can also work as a template for other third-party VST/AU MIDI plugins. Read more.

AS Snapshots (1.0)
It's designed to be used with the Snapshots feature in AudioSwift. Watch video.

1.2 Installation

It requires at least Ableton Live 11 and they should work with both macOS and Windows computers. The Scaler MIDI requires Ableton Live 12.

Download the MaxForLive devices and move the .amxd files to your User Library where you save other MaxForLive devices and sample libraries.

Once it's in your User Library, insert the devices in your tracks.
